

Install Senrio Insight

Software on Your Hardware

1 Download

Download from our web store or check your welcome email for links to the sensor for VMWare, VirtualBox or Docker.

2 Open VM

Unzip the VM. Move the resulting directory to the location where Senrio should run.

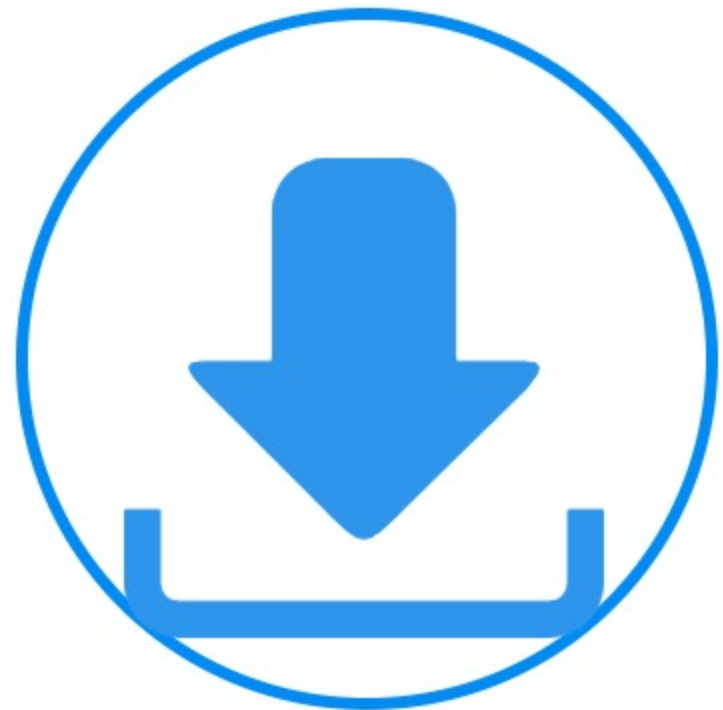

4 Start VM

Select the VM and click the green arrow to start the Senrio VM.

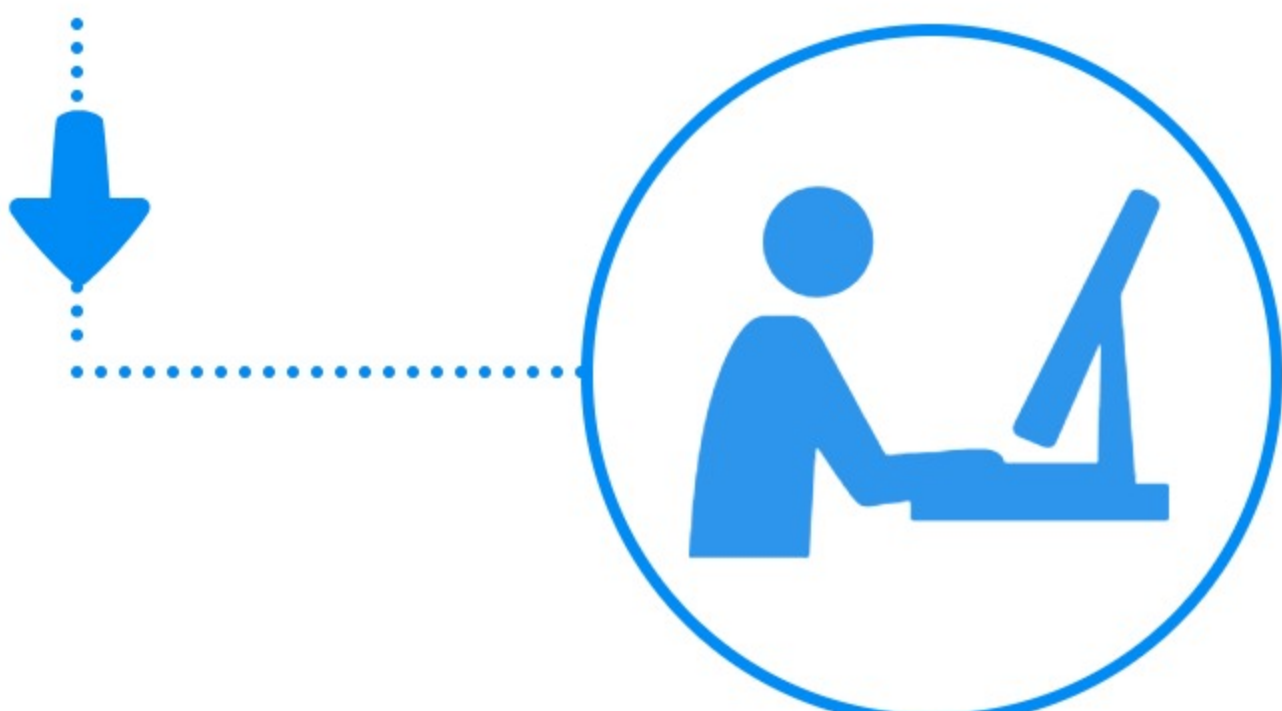

3 Set-up

Select network interfaces for sensors and analysis, and generate new MAC address for the sensor interface.

5 Download

Download and import your custom browser keys.

6 Login

Go to <http://newfrontend.senr.io>. A confirmation email will let you know when your account is set up. You can now add sensors and begin to collect data on your devices.
